

VCS AKTIENGESELLSCHAFT
now operates as
SCISYS DEUTSCHLAND GMBH

VCS Aktiengesellschaft has changed legal basis and name with effect from 12th of December 2011. The Company now operates as SCISYS Deutschland GmbH. The activities of SCISYS are focussing on the realisation of complex ground segment infrastructures as well as information and communication solutions within the business segments Space, Security and Earth Observation.

- * Satellite ground segment and related infrastructure
- * Control Centres for operational mission support
- * Integrated management of systems and infrastructures
- * Professional solutions for satellite meteorology, based on the 2met!(r) product line
- * Integrated applications and services (e.g. Satellite Navigation, Earth Observation, Communication)

For more than 25 years, our company is acting successfully in the business of satellite communications, Earth Observation and meteorological user stations as one of the leading suppliers. Based on our experience in developing professional Earth Observation systems, we offer a complete product line under the trademark 2met!(r). These products range from satellite receiving components to value-adding applications within the Earth Observation markets.

Well-known as a system-integrator, we are capable of taking the full responsibility for turnkey deliveries of large and extended satellite ground systems. 2met!(r) is the proven multi-mission concept for real-time data acquisition and processing of Earth Observation satellites. It is a commercial off-the-shelf solution, based on standard

operating systems and protocols. 2met!(r) supports a variety of remote sensing satellites such as METEOSAT, MSG, GMS, GOES, MTSAT, NOAA, Feng-Yun, METOP, TERRA and AQUA as well as the future NPP and NPOESS missions. User-specific solutions are offered for the reception and processing of meteorological satellite images disseminated via EUMETCast/GEONETCast.
